MEYLE-HD Control Arm Bushings with Improved Rubber Compound and Optimised Rubber Profile

to fit Volvo 60, S80, V70 II and XC70 models

A service life test conducted on our MEYLE-HD bushings, as part of a series of routine comparative tests, has uncovered additional product refinement potential. Now MEYLE offers an upgraded HD control arm bushing featuring a newly formulated rubber compound and optimised inner structure.

The new MEYLE-HD bushings are engineered to withstand even higher operating loads for an even longer period of time. And so now the respective control arms include the new MEYLE-HD bushing.
